Insecta Mundi is a journal primarily devoted to insect systematics, but articles can be published on any non-marine arthropod. Topics considered for publication include systematics, taxonomy, nomenclature, checklists, faunal works, and natural history. **Insecta Mundi** will not consider works in the applied sciences (i.e. medical entomology, pest control research, etc.), and no longer publishes book reviews or editorials. **Insecta Mundi** publishes original research or discoveries in an inexpensive and timely manner, distributing them free via open access on the internet on the date of publication.

Insecta Mundi is referenced or abstracted by several sources including the Zoological Record, CAB Abstracts, etc. **Insecta Mundi** is published irregularly throughout the year, with completed manuscripts assigned an individual number. Manuscripts must be peer reviewed prior to submission, after which they are reviewed by the editorial board to ensure quality. One author of each submitted manuscript must be a current member of the Center for Systematic Entomology. Manuscript preparation guidelines are available at the CSE website.

Managing editor: Paul E. Skelley, e-mail: insectamundi@gmail.com

Abstract. A preliminary checklist of the Cerambycidae, Disteniidae, and Vesperidae (Coleoptera) of Peru is presented. Within Cerambycidae, we record five subfamilies, 55 tribes, 345 genera and subgenera, and 714 species. Within Disteniidae, we record one tribe, six genera, and 11 species. We also record one subfamily, one tribe, one genus, and two species within Vesperidae. Four **new country records** are recorded: one species in the tribe Anacolini (Cerambycidae: Prioninae): *Cycloprionus flavus* Tippmann, 1953; and three species in the tribe Onciderini (Cerambycidae: Lamiinae): *Cacostola simplex* (Pascoe, 1859); *Marensis simplex* (Bates, 1865); *Trachysomus cavigibba* Martins, 1975. In addition, 161 species recorded are known only from Peru.

Keywords. South America; Coleoptera; faunal survey; Neotropical; new country records; taxonomy

Resumen. Se presenta una lista preliminar de los Cerambycidae, Disteniidae, y Vesperidae (Coleoptera) de Perú. Entre Cerambycidae, se reporta cinco subfamilias, 55 tribus, 345 generas y subgéneros, y 714 especies. Entre Disteniidae, se reporta una tribu, seis géneros, y 11 especies. También se reporta una subfamilia, una tribu, un género, y dos especies para Vesperidae. Cuatro **nuevos registros** para el país se reportan: una especie en la tribu Anacolini

(Cerambycidae: Prioninae): *Cycloprionus flavus* Tippmann, 1953; y tres especies en la tribu Onciderini (Cerambycidae: Lamiinae): *Cacostola simplex* (Pascoe, 1859); *Marensis simplex* (Bates, 1865); *Trachysomus cavigibba* Martins, 1975. Adicionalmente, 161 especies registradas se conocen sólo de Perú.

Palabras claves. Sudamérica; Coleoptera; estudio faunístico; neotropical; nuevos registros para el país, taxonomía

Introduction

With approximately 1,285,200 km², Peru is the third-largest country in South America. Peru is bordered by Ecuador and Colombia to the north, Brazil and Bolivia to the east, Chile to the south, and the Pacific Ocean to the west. The topography of Peru is highly complex, with 11 ecological regions and 84 life zones (Brack Egg and Vargas 2004). Peru may be divided into three major regions: Andean cordillera, Amazonian lowlands, and Pacific coast. The Andean cordillera runs north-south along the length of the country, with peaks exceeding 6,000 m in elevation. Over half of Peru's landmass is located within the Amazonian lowlands, east of the Andean cordillera. The dry, 3,000 km-long Pacific coast is characterized by desert and scrub habitat, bordering with Chile's Atacama Desert in the south.

Given its ecological diversity, it is perhaps not surprising that Peru is considered a mega diverse country (CONAM 1999). For example, there are 25,000 species of plants (Brack Egg and Vargas 2004), 1,800 species of birds (Schulenberg et al. 2007), and 1,010 species of freshwater fishes recorded (Ortega et al. 2011). Among insects, ~4,000 species butterflies (Lepidoptera: Papilionoidea, Hesperioidea) (G. Lamas, personal communication), ~600 species of tiger moths (Lepidoptera: Arctiidae) (J. Grados, personal communication), and 1,169 species of wasps (Hymenoptera: Aculeata) (Rasmussen and Asenjo 2009) are known from Peru. Aguilar et al. (1998) list 4,151 species of Coleoptera from Peru. Among these, 394 species of rove beetles (Staphylinidae) (Asenjo 2004) and ~500 species of dung beetles (Scarabaeinae) are recorded (L. Figueroa, personal communication).

Bouchard et al. (2011) list four cerambycid families within the superfamily Chrysomeloidea Latreille, 1802: Cerambycidae Latreille, 1802; Disteniidae Thomson, 1861; Oxypeltidae Lacordaire, 1868; and Vesperidae Mulsant, 1839. Over the last decade, several cerambycid faunal checklists have been produced for various Neotropical countries and regions (e.g., Hovore 2006 (Guatemala); Wappes et al. 2006 (Bolivia); Monné et al. 2009 (Parque Nacional do Itatiaia, Brazil); Swift et al. 2010 (Costa Rica)). This work represents the first effort to list the cerambycid diversity of Peru and serves as baseline knowledge for the study of these families in the region. In addition, we indicate those cerambycid species known only from Peru.

Materials

Data used in this checklist are primarily derived from the Monné (2005a, 2005b, 2006) and Monné and Bezark (2011) and follows the classification of Bouchard et al. (2011). Four collections were also used: **JTPC**: Julien Touroult Private Collection, Soyaux, France; **MNHN**: Muséum National d'Histoire Naturelle, Paris, France; **MNRJ**: Museu Nacional, Universidade Federal do Rio de Janeiro, Rio de Janeiro, Brazil; **MUSM**: Museo de Historia Natural Universidad Nacional Mayor de San Marcos, Lima, Peru. Literature references and synonyms correspond to those in Monné and Bezark (2011) and are not presented in this checklist for brevity. No taxonomic or nomenclatural changes are proposed in this work. Any inconsistencies herein are solely errors, and should not be considered as explicit taxonomic statements.

Discussion

The cerambycid beetles (families Cerambycidae, Disteniidae, Oxypeltidae, and Vesperidae) are a charismatic and economically important group of insects with an estimated 4,000 genera and 35,000 described species worldwide (Lawrence 1991). Cerambycoids are among the most serious wood boring

pest species in the world, affecting various agricultural crops, ornamental trees, and lumber products, causing millions of dollars in damage each year (Solomon 1995).

Three of four cerambycoid families (Cerambycidae, Disteniidae, and Vesperidae) are recorded from Peru. Five of nine subfamilies of Cerambycidae (Cerambycinae Latreille, 1802; Lamiinae Latreille, 1825; Lepturinae Latreille, 1802; Parandrinae Blanchard, 1845; Prioninae Latreille, 1802) and one of three subfamilies of Vesperidae (Anoplodermatinae Guérin-Ménéville, 1840) are recorded from Peru. Within Cerambycidae, we list 714 species in 345 genera and subgenera and 55 tribes. Within Disteniidae, we list 11 species in six genera and one tribe. We also list two species in one genus and one tribe of Vesperidae. Four new country records are recorded: one species in the tribe Anacolini (Cerambycidae: Prioninae): *Cycloprionus flavus* Tippmann, 1953; and three species in the tribe Onciderini (Cerambycidae: Lamiinae): *Cacostola simplex* (Pascoe, 1859); *Marensis simplex* (Bates, 1865); *Trachysomus cavigibba* Martins, 1975. In addition, 161 species recorded are known only from Peru.

New Country Records

***Cycloprionus flavus* Tippmann, 1953** (Cerambycidae: Prioninae: Anacolini) is recorded from Peru, **new country record**. One male and one female specimen (MNRJ), Peru: Junin: Satipo, II.1944, A. Maller col. This species was previously recorded from Brazil and French Guiana (Monné 2006; Monné and Bezark 2011).

***Cacostola simplex* (Pascoe, 1859)** (Cerambycidae: Lamiinae: Onciderini) is recorded from Peru, **new country record**. One male specimen (MNHN), Peru: Amazonas, Cavallo-Cocho, Mai-Juillet 1884, M. de Mathan. This species was previously recorded from Brazil and French Guiana (Monné 2005b; Monné and Bezark 2011).

***Marensis simplex* (Bates, 1865)** (Cerambycidae: Lamiinae: Onciderini) is recorded from Peru, **new country record**. One male specimen (JTPC), Peru: Satipo, Junin, 2009, via P. Demez. This species was previously recorded from Brazil and Ecuador (Monné 2005b; Monné and Bezark 2011).

***Trachysomus cavigibba* Martins, 1975** (Cerambycidae: Lamiinae: Onciderini) is recorded from Peru, **new country record**. One male specimen (JTPC), Peru: Satipo, Junin, Rio Venado, 700 m, I-2011, via P. Demez. This species was previously recorded from Bolivia (Monné 2005b; Monné and Bezark 2011).

Acknowledgments

The following individuals and institutions are gratefully acknowledged: Gerardo Lamas, Luis Figueroa, and Juan Grados (MUSM); Julien Touroult (JTPC); Thierry Deuve and Azadeh Taghavian (MNHN); Steven W. Lingafelter (Systematic Entomology Lab, National Museum of Natural History, Smithsonian Institution, Washington, DC, USA); Amy Berkov (Department of Biology, City College of New York, New York, NY, USA); Kelly B. Miller and Nathan P. Lord (Department of Biology, Museum of Southwestern Biology, University of New Mexico, Albuquerque, NM, USA). Antonio Santos-Silva (Museu de Zoologia, Universidade de São Paulo, São Paulo, Brazil), Maria Helena M. Galileo (Museu de Ciências Naturais, Porto Alegre, RS, Brazil), and Paul Skelley (Florida State Collection of Arthropods, Gainesville, FL, USA) provided helpful comments to a previous version of this manuscript.
